10 Gigabit Optical Module Optical Power

Overview

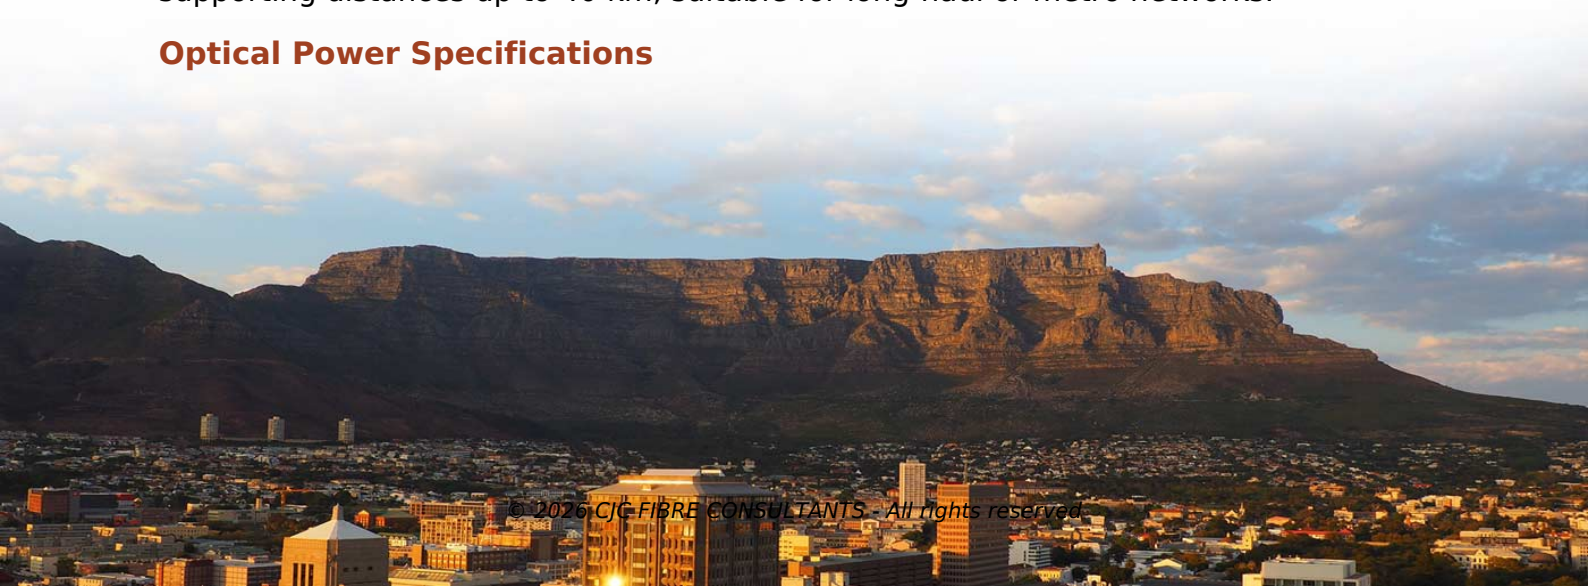

This feature gives the end user the ability to monitor real-time parameters of the SFP, such as optical output power, optical input power, temperature, laser bias current, and transceiver supply voltage.

Key Takeaways

10G SFP+ optical modules typically operate with transmit powers ranging from approximately -5 dBm to +3 dBm and receive sensitivities from around -14 dBm to -8 dBm, depending on the module type and distance. Overview of 10G SFP+ Modules10 Gigabit SFP+ modules are designed for high-speed Ethernet connections and come in several types based on fiber type and reach: 10GBASE-SR (Short Range): Uses multimode fiber (MMF) at 850 nm, supporting distances up to 300 meters on OM3 and 400 meters on OM4 fiber. These modules are commonly used in data centers for short interconnects.

10GBASE-LR (Long Range): Operates at 1310 nm over single-mode fiber (SMF), supporting distances up to 10 km. Typical modules use LC duplex connectors and may include Digital Diagnostic Monitoring (DDM) for real-time optical power monitoring. 10GBASE-ER (Extended Range): Also operates at 1310 nm over SMF, supporting distances up to 40 km, suitable for long-haul or metro networks.

Optical Power Specifications

While exact values vary by manufacturer, standard optical power ranges for 10G SFP+ modules are: Transmit Power (Tx): 10GBASE-SR: ~ -7 dBm to -1 dBm10GBASE-LR: ~ -8 dBm to +0. 5 dBm10GBASE-ER: ~ 0 dBm to +3 dBmReceive Sensitivity (Rx): 10GBASE-SR: ~ -11 dBm to -3 dBm10GBASE-LR: ~ -14 dBm to -8 dBm10GBASE-ER: ~ -18 dBm to -8 dBm These ranges ensure sufficient optical budget to accommodate fiber loss, connector loss, and other link impairments. Modules with DDM/DOM support allow monitoring of Tx and Rx power in real time, which is critical for maintaining link reliability.

Practical Considerations

Fiber Type: Ensure the module matches the fiber type (MMF for SR, SMF for LR/ER) to avoid excessive loss. Distance: Optical power must be sufficient to cover the intended link distance while maintaining a safety margin. Compatibility: Modules following IEEE 802.

3ae standards and SFP+ MSA agreements are broadly interoperable across switches, routers, and NICs. Power Consumption: Most 10G SFP+ modules consume around 1–1. 5 W, making them energy-efficient for high-density deployments.

In summary, the optical power of a 10G SFP+ module depends on the type and reach, with typical transmit powers from -5 dBm to +3 dBm and receive sensitivities from -14 dBm to -8 dBm, ensuring reliable 10 Gigabit Ethernet connectivity over the specified fiber distances.
