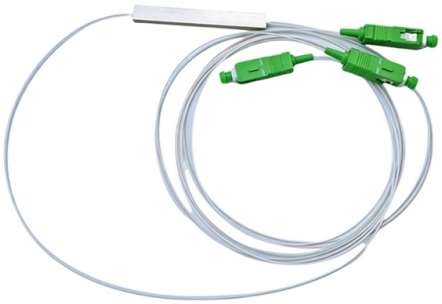
# Cable trays and cable ducts price



## Overview

Cable trays Cable trays Discover a comprehensive range of high-quality cable trays and cable ladders at ekabel24.com – the reliable choice for safe, organi.

## Key Takeaways

Cable trays and network cable ducts range from approximately $0. 80 to $76 per unit depending on type, material, and purchase volume. Cable Tray PricingB2C (retail) prices for small-scale or home office use typically range from $15 to $34 per tray, with some wholesale options as low as $0.

92 per unit. These are often lightweight wire mesh or basket trays suitable for under-desk cable management.

B2

B (industrial/commercial) prices vary significantly based on material and size. For example: Ladder-type cable trays (heavy-duty, pre-galvanized or hot-dipped galvanized) can range from $0. 80 to over $76 per unit, depending on width, length, and load capacity.

Perforated or wire mesh trays are generally lighter and more affordable, ideal for data centers or network cabling. Aluminum trays are lighter and easier to handle but typically cost more than steel trays due to material pricing. Bulk purchases through B2B suppliers like Alibaba or industrial distributors often reduce per-unit costs significantly, making them cost-effective for large projects.

### Network Cable Ducts

Network cable ducts, including mesh trays and wire ducts, are designed for organized routing of data and power cables in server rooms, raised floors, or industrial environments. Prices depend on: Material: Stainless steel or pre-galvanized steel for corrosion resistance. Size and span: Larger spans reduce the number of brackets needed, lowering installation costs.

Certification: Systems meeting safety standards (e.g., DNV certified) may have higher upfront costs but ensure compliance and durability. Wire mesh or basket trays are often the most cost-effective for network cabling, offering easy installation, flexibility, and reduced labor costs compared to conduit systems.

### Cost Considerations

Installation efficiency: Open trays allow cables to be laid directly, saving labor compared to conduit systems, which require threading wires through pipes. Project scale: Large-scale industrial or commercial projects benefit from bulk purchasing and modular systems to reduce overall costs. Material choice: Steel is cheaper and heavier, aluminum is lighter but more expensive, and stainless steel offers corrosion resistance at a premium.

In summary, small-scale network cable ducts can cost under $1 per unit wholesale, while industrial cable trays range from a few dollars to over $70 per unit, depending on material, type, and volume. Choosing the right system involves balancing material durability, installation efficiency, and project scale.
