What is the appropriate width for corrosion-resistant cable trays

Overview

The width of the tray depends on the number and diameter of cables to be accommodated. As a rule of thumb, trays should be filled up to only 40–50% of their total width to allow proper ventilation and future expansion. The mechanical and electrical characteristics, tests, certifications, overall quality management, recommendations mentioned in this technical guide only apply to our own cable management ranges and cannot under any circumstances be transposed to si osure, overheating or. maintain spacing or to keep cables in place when the tray is ect the minimum bend ra-dius for cables as they exit the bottom of the cable tray. For small control cables, 50–200 mm. Ladder cable tray is available in widths of 6, 9, 12, 18, 24, 30, 36, 42 and 48 inches with rung spacings of 6, 9, 12 or 18 inches. Note that wider rung spacings and wider cable tray widths decrease the overall strength of the cable tray. NEC cable. In this article, we will discuss how to make the best choice for anti-corrosive cable trays across various corrosion levels to guarantee the safety, longevity, and performance of your electrical system.
