Are there cable trays for electrical equipment inside the shaft

Overview

Firestopping Requirements for Cable Trays and Wall/Slab PenetrationsWhere cables pass through shafts, walls, slabs, or enter electrical panels or cabinets.

Key Takeaways

Cable trays in electrical shafts provide structured support, protection, and fire safety for power and communication cables, ensuring compliance with technical and fire regulations.

Purpose and Function

Cable trays are engineered support systems designed to route, support, and protect insulated electrical cables used for power distribution, control, instrumentation, and communication. Unlike conduits, they allow cables to be laid in bundles, improving accessibility, heat dissipation, and scalability of the electrical system ( ). In electrical shafts, cable trays help organize vertical cable runs while maintaining structural integrity and safety.

Types of Cable Trays

Common types suitable for shafts include: Ladder trays: Two side rails connected by rungs, ideal for heavy cables and good ventilation ( ). Solid-bottom trays: Provide full protection against dust and debris, suitable for sensitive environments ( ). Ventilated trays: Allow airflow to dissipate heat, reducing the risk of overheating ( ).

Wire mesh trays: Lightweight, flexible, and easy to install in tight shaft spaces ( ). Material selection depends on the environment: galvanized steel, stainless steel, aluminum, or fiberglass-reinforced plastic are commonly used for corrosion resistance and mechanical strength ( ).

Installation Considerations

Supports and suspension: Cable trays must be securely supported using hangers, brackets, or shaft-specific suspension systems. Pre-galvanized, hot-dip galvanized, or painted supports are used depending on environmental conditions ( ). Layout: Position trays to allow reasonable access for installation and maintenance, avoiding sharp bends and ensuring proper load distribution ( ).

Floor and slab penetrations: At floor level or slab penetrations, install a waterstop of at least 50 mm and provide 20–30 mm of firestopping with a fire-support plate at the top ( ).

Fire Safety and Compliance

Electrical shafts require strict fire protection measures: Use fire-rated boards, firestop packs, firestop mastic, or mineral wool to seal gaps around trays ( ). Ensure tight sealing without visible cracks, with packing thickness not less than 24 cm and gaps around cables under 1 cm^2 ( ). Cover plates should be square, consistent, and painted to maintain fire integrity ( ).

Firestopping ensures that vertical cable runs do not compromise the shaft's fire-resistance rating.

Best Practices

Select tray type based on cable weight, heat generation, bend radius, and environmental exposure ( ). Maintain clear labeling and separation of power and communication cables to reduce interference. Regularly inspect trays for corrosion, mechanical damage, and firestop integrity.

Follow national and international standards (e.g., UL, NEMA, CE marking) for material and installation compliance ( ). By following these guidelines, cable trays in electrical shafts can provide safe, organized, and code-compliant cable management, ensuring both operational efficiency and fire safety.

Article Content

Firestopping Requirements for Cable Trays and Wall/Slab Penetrations

Where cables pass through shafts, walls, slabs, or enter electrical panels or cabinets, openings shall be tightly sealed with firestopping materials in accordance with design requirements.

Cable Tray Technical Guide A practical guide to product selection and ...

Cable tray is considered to be a system. It must provide continuous support for cables, and the electrical continuity of the cable tray system must be maintained.

NEC Article 392 Guide: Ensuring Compliance for Cable

Master NEC Article 392 with our comprehensive guide. Learn essential cable tray requirements for installation, grounding, and fill capacity to

GUIDE CABLE TRAYS TECHNICAL

If it has excellent electrical continuity and is integrated in the installation''s equipotential bonding system, a metal cable tray reduces the coupling''s impact and thus contributes to good EMC of the electrical

Cable Tray Institute

Question: Can mechanical utility piping or tubing containing water or compressed air be installed in cable trays with electrical cables? Answer: No. Cable trays are a support system for electrical cables,

Best Practice Guide to Cable Ladder and Cable Tray Systems

This guide covers cable ladder systems, cable tray systems, channel support systems and associated supports intended for the support and accommodation of cables and possibly other electrical

Cable Tray Installation Overview

The document provides detailed information on the installation of various cable trays, including their descriptions, starting and ending points, and sizes. It includes sections for different areas such as

1910.305

Cable assemblies and flexible cords and cables shall be supported in place at intervals that ensure that they will be protected from physical damage. Support shall be in the form of staples, cables ties,

Cable Tray | EAE Electric | Medium & heavy duty cable trays

© 2026 CJC FIBRE CONSULTANTS - All rights reserved

EAE Electric cable tray systems have been designed to and easy to install. Supply a complete range of cable tray including medium & heavy duty!

Cable Tray Questions | Cable Tray Institute

Question 1: Can mechanical utility piping or tubing containing water or compressed air be installed in cable trays with electrical cables? Answer: No. Cable trays are a support system for electrical cables,
