Cable tray type C

Overview

Beli aneka produk Cable Tray Type C online terlengkap dengan mudah, cepat & aman di Tokopedia. Kamu bisa menemukan toko penjual Cable Tray Type C terdekat dari lokasi kamu sekarang.

Key Takeaways

Cable Tray Type C is a channel-style cable tray designed for supporting and routing electrical cables in industrial and commercial installations.

Overview

Cable Tray Type C, often referred to as a channel tray, is a solid or partially perforated tray with a U-shaped cross-section that provides support for electrical cables while protecting them from mechanical damage. Unlike ladder trays, Type C trays have continuous side walls, which makes them suitable for installations where dust, debris, or small objects could fall onto the cables. They are commonly used for light to medium cable loads and are ideal for control, instrumentation, and communication cables.

Material and Construction

Type C trays are typically made from galvanized steel, aluminum, or fiber-reinforced plastic (FRP), offering corrosion resistance and durability. The solid or perforated bottom allows for easy cable fastening using cable ties or clamps, while the side walls provide mechanical protection. The trays are manufactured according to IEC 61537 standards, ensuring compliance with international cable management requirements.

Dimensions and Sizing

Cable Tray Type C comes in various widths, depths, and lengths to accommodate different cable volumes and installation needs. Standard widths range from 50 mm to 600 mm, with side wall heights typically between 50 mm and 150 mm. Lengths are usually 2 to 3 meters per section, and material thickness varies depending on load requirements.

Proper sizing ensures adequate cable fill, heat dissipation, and structural integrity.

Applications

Industrial plants: Protects control and instrumentation cables from mechanical damage. Commercial buildings: Organizes power and communication cables in confined spaces. Data centers: Provides structured cable routing while minimizing dust accumulation.

Renovation projects: Easy to install in existing structures due to modular design.

Availability and Purchasing

Cable Tray Type C is widely available online and through local distributors. In Indonesia, for example, platforms like Tokopedia offer a variety of Type C trays with options for same-day delivery, free shipping, and installment payments. When purchasing, consider material, dimensions, load capacity, and environmental conditions to ensure compatibility with your project requirements.

Key Advantages

Mechanical protection for cables due to side walls. Easy installation and maintenance with modular sections. Versatile for light to medium cable loads.

Compliance with international standards ensures safety and reliability. Cable Tray Type C is a practical solution for projects requiring organized, protected, and accessible cable routing, especially in environments where dust, debris, or accidental contact could compromise cable integrity.
