

Can cable trays be installed in cable junction boxes

Overview

Cable tray is considered to be a system. It must provide continuous support for cables, and the electrical continuity of the cable tray system must be maintained.

Key Takeaways

Junction boxes cannot be placed inside cable trays; they must be mounted externally and remain accessible according to NEC requirements.

NEC Requirements

According to the National Electrical Code (NEC), all wire splices and connections must be enclosed in an approved junction box to ensure safety, accessibility, and protection from physical damage (NEC 314. 16, 314. 17).

A key requirement is that junction boxes must remain accessible without removing building structures, meaning they cannot be hidden inside cable trays or other enclosures that would prevent inspection or maintenance.

Cable Tray Considerations

Cable trays are designed to support and route cables, not to serve as enclosures for splices or junction boxes. While you can mount a junction box on the side or bottom of a cable tray, placing splices directly inside the tray is generally not allowed except in certain industrial applications under NEC 392. 6(J).

This ensures that splices are protected, serviceable, and compliant with box fill and grounding requirements.

Practical Installation Tips

Mount externally: Attach the junction box to the tray or nearby structure, ensuring it is secure and accessible. Use proper fittings: Bring cables into the box with clamps or conduit fittings to prevent abrasion and maintain mechanical protection. Maintain box fill compliance: Ensure the box has enough volume for all conductors, splices, and fittings according to NEC 314.

16. Accessibility: The cover must be removable without dismantling the tray or surrounding structures. Environmental considerations: Use boxes rated for the location (indoor, outdoor, damp, or corrosive environments).

Summary

While cable trays provide excellent cable management, junction boxes must remain separate and accessible. Splices should never be placed directly inside the tray except in specific industrial exceptions. Proper mounting, box selection, and adherence to NEC rules ensure safety, code compliance, and ease of maintenance.
