

Can telecommunication towers be dismantled

Overview

The Supreme Court held that telecommunication towers are movable goods because they are manufactured off-site, assembled on-site, can be dismantled without structural damage, and are fixed only for operational stability. ACT Technology carries out the safe dismantling of towers that have reached the end of their service life or are surplus to requirements, and relocates them to new sites when necessary. With its expert team, the company provides fast, reliable, and environmentally responsible dismantling solutions. Our crews can also remove and dispose even the largest earth stations, support frames and posts, as required. Sometimes, due to technology upgrades, urban expansion, lease issues, or cost inefficiencies, telecom operators must decommission — or shut down — certain tower sites. Sounds easy, right?

Just switch off and walk away?

Not quite. Decommissioning a tower site is more than unplugging cables. It covers every stage from initial conception to final decommissioning.
