

Combating Fiber Optic Cables

Overview

A Ukrainian front-line city has been smothered by a giant web of fibre optic cable from hundreds of drone battles in the skies.

Key Takeaways

Defeating fiber optic cables can involve physical damage, such as cutting the cables, or employing advanced countermeasures like directed-energy systems.

Physical Disruption

Cutting the Cables: One of the simplest methods to disable fiber optic systems is to physically cut the cables. This can be done using tools like scissors or other cutting instruments. For instance, during military operations, soldiers have successfully used scissors to sever the optical fibers of drones, causing them to lose control and crash.

However, this method requires close proximity to the target and can expose personnel to significant risks, including explosives and gunfire. **Bending the Cables:** Fiber optic cables are sensitive to bending. Bending them beyond their minimum bend radius can cause permanent damage, leading to signal loss.

This method, while less direct, can be a way to disrupt communications if the cables are accessible. **Advanced Countermeasures Directed-Energy Systems:** Instead of physical damage, advanced technologies like directed-energy weapons can be employed to disable fiber optic drones without direct contact. Systems like the Hobit HL20 Laser Anti-Drone System can project concentrated heat beams to disable drones within seconds, effectively neutralizing both radio-controlled and fiber-optic drones.

This method reduces risks to personnel and can be deployed from a distance. Shooting Down Drones: Fiber optic drones, while more difficult to jam electronically, can still be targeted and shot down due to their larger size and reduced maneuverability compared to smaller drones. Military units have successfully engaged these drones using small arms fire.

Conclusion

While physically cutting fiber optic cables is a straightforward method to disrupt their functionality, it comes with significant risks. Advanced countermeasures like directed-energy systems offer a safer and more effective alternative for neutralizing threats posed by fiber optic technology in military applications.

Watch: Ukraine front-line city blanketed in web of drone

A Ukrainian front-line city has been smothered by a giant web of fibre optic cable from hundreds of drone battles in the skies.

Fiber Conflict: The Undersea Cable Competition

You have heard of cyber war but we are also undergoing fiber war, or the conflict over controlling the means of delivering information. This encompasses the challenge of protecting the

Fiber Optic Cables Turned Into Hidden Microphones to Secretly Spy

Fiber Optic Cables Turned Into Microphones Fiber optic cables have long been considered inherently secure communication channels resistant to RF emissions and electromagnetic

Unjammable Drones Leave Wires, Force Ukrainians to Move With

Ukraine and Russia have expanded production of fiber-optic drones over the past year, and both sides are racing to develop variants that can fly farther across the front lines.

Ukraine Discloses New Method To Defeat Russian Fiber-Optic

A storied Ukrainian military drone unit said it has developed a way to counter an increasingly deadly weapon — Russian first-person view (FPV) drones that use fiber optic cables

Two Pivotal Issues Regarding Fiber-Optic FPV Drones

On the battlefields of the Russian-Ukrainian war, the use of FPV drones controlled via fiber-optic cables is becoming increasingly widespread.

Drones guided via cables change battlefield in Ukraine

Drones guided via fiber optic cables are making their presence known in the ongoing war in Ukraine, offering both advantages and challenges in modern warfare.

Ukraine battlefields strewn with "spider webs" from

The battlefields in Ukraine are being left strewn with "spider web" like cables as a terrifying new type of weapon is being deployed. The ethereal wires

U.K. internet provider's bailout cancelled because rats chewed through ...

Tech Industry U.K. internet provider's bailout cancelled because rats chewed through its fiber optic cables — biodegradable cable jackets use soy- or corn-based materials, attracting hungry

When you can't jam a drone, try cutting its cord with scissors

Optical fiber is tough, but it can be broken by bending it 180 degrees. Surgical scissors can also cut right through it—as the Russians were well aware. “Got the scissors?” one hidden
