Common Climbing Methods for Cable Trays

Overview

Equipment Grounding Conductors for Cable Tray Systems Cable tray wiring systems have excellent safety and dependability records.

Key Takeaways

Climbing cable trays directly is unsafe and not recommended; safe access requires ladders, scaffolding, or engineered platforms designed for personnel.

Safety Considerations

Cable trays are designed to support cables, not people. Using them as ladders or walkways can cause personal injury and damage the cables or tray system (BEAMA guide). Climbing energized trays is particularly hazardous and may violate NEC and OSHA regulations.

Always assume electrical hazards are present and use proper personal protective equipment (PPE), including insulated gloves, safety harnesses, and non-conductive footwear.

Safe Access Methods

Ladders and Step PlatformsUse portable or fixed ladders positioned adjacent to the tray. Step platforms or catwalks can provide safe access along long runs of cable trays.

Scaffolding or Elevated Work Platforms

For high or extended tray runs, scaffolding or mobile elevated work platforms (MEWPs) allow safe access without placing weight on the tray itself.

Trapeze Hangers and Cantilever Supports

While these are primarily for supporting the tray, they can be integrated with engineered walkways or platforms to provide safe access points for maintenance personnel.

Fall Protection Systems

When working at height, use fall arrest systems anchored to structural supports, not the cable tray. Ensure compliance with OSHA fall protection standards.

Installation and Maintenance Tips

Plan Access Routes: During installation, consider future maintenance and include safe access points. Avoid Overloading: Do not place additional weight on trays beyond their rated load, as this can compromise structural integrity. Use Proper Tools: Cable pulling and maintenance should be done with tools designed for tray systems, avoiding climbing whenever possible.

Summary

Directly climbing cable trays is unsafe and non-compliant with electrical safety standards. Safe methods include ladders, scaffolding, elevated platforms, and engineered walkways, combined with proper PPE and fall protection. Always follow NEC, OSHA, and manufacturer guidelines to prevent injury and protect the integrity of the cable system.
