Connection of leakage protection distribution box

Overview

Implementation: Install one or more high-sensitivity leakage current protection relays on the incoming line side of each terminal distribution box (such as a lighting box or socket box). When wiring, make sure the stripped length of the wire is appropriate. After inserting the wire into the wiring hole, tighten the screw to ensure good contact and prevent loosening and. Distribution Board or DB is an electricity supply system or a common enclosure that distributes the electrical power feed into subcircuits. The devices installed for this purpose are, like so many other electrical products, subject to design and material shortcuts in order to reduce cost and attract those who. Fixed setting RCD with a rated operating residual current not exceeding 30mA.
