Custom-made protection for distribution boxes

Overview

Weather protection for 125" Distribution box. Manufactured of waterproofed and robust CORDURA Material.

Key Takeaways

Custom-made distribution boxes provide tailored protection, ensuring safety, durability, and optimal functionality for specific industrial, commercial, or hazardous environments.

Overview of Custom Distribution Boxes

Custom distribution boxes are designed to house and protect electrical components such as circuit breakers, wiring, connectors, fuses, and switches. Unlike standard enclosures, they can be tailored in size, shape, internal layout, hole placement, and protection level to meet the exact requirements of a project, ensuring easier installation, maintenance, and long-term reliability.

Materials and Construction

These boxes are typically made from high-strength cold-rolled steel, stainless steel (304/316), or aluminum alloys, often with electrostatic powder coating or anti-rust finishes. This ensures mechanical strength, corrosion resistance, and durability in both indoor and outdoor environments. For hazardous areas, explosion-proof or ATEX-certified options are available, using stainless steel or GRP materials to withstand extreme conditions.

Protection Standards

Custom enclosures can meet IP65 and above or NEMA 1, 3R, 4, 4X, and 12 standards, providing protection against dust, moisture, water splashing, and physical impact. Explosion-proof versions are designed for hazardous areas, ensuring compliance with ATEX and IECEx certifications. These standards guarantee safe operation in industrial automation, renewable energy, water treatment, and infrastructure projects.

Customization Benefits

Optimized internal layout for circuit breakers, terminals, and wiring, reducing installation errors and improving maintenance efficiency. Flexible mounting options: wall-mounted, floor-standing, or pole-mounted to suit the installation site. Special features: viewing windows, lock options, cable entries, and future expansion space.

Rapid production: some manufacturers can deliver custom boxes in as fast as 2 days, depending on complexity and quantity.

Applications

Custom distribution boxes are widely used in industrial automation, building engineering, transportation, renewable energy, utilities, and municipal infrastructure. They are particularly valuable when standard boxes cannot accommodate specific component arrangements, environmental conditions, or safety requirements.

Conclusion

Investing in a custom-made distribution box ensures that your electrical system is safe, reliable, and tailored to your operational needs. By selecting the right materials, protection standards, and internal layout, you can enhance installation efficiency, reduce maintenance challenges, and ensure long-term durability, even in harsh or hazardous environments.
