Key Takeaways

Pull boxes should generally be installed every 100 feet or at points with two 90° bends (180° total), while conduit supports depend on material, typically every 3-10 feet.

Pull Box Spacing

Pull boxes are installed to facilitate cable pulling and maintenance. Standard guidelines recommend: Maximum interval: Pull boxes should be placed no more than 100 feet apart along a conduit run. Bend considerations: A pull box is required whenever there are two 90° sweeps or a total of 180° of bends in a conduit run.

Approval for deviations: Any exceptions to these criteria should be approved by the authority having jurisdiction or project-specific standards. These intervals ensure that cable pulling tension remains within safe limits and reduce the risk of damage during installation or maintenance.

Conduit Support Intervals

Conduit support spacing varies by material and installation type: EMT (Electrical Metallic Tubing): Supported every 10 feet and within 3 feet of each junction box.

PV

C (Rigid Nonmetallic Conduit): Supported every 3 feet, due to flexibility and thermal expansion.

RM

C (Rigid Metal Conduit) and IMC (Intermediate Metal Conduit): Typically supported every 10 feet, with closer spacing recommended if exposed to physical damage or long horizontal runs. Additional supports should be added within 2 feet of bends or changes in direction to prevent sagging and maintain structural integrity.

Practical Considerations

Environment: Outdoor or industrial installations may require more frequent pull boxes or supports due to temperature changes, mechanical stress, or vibration. Cable type and length: Long runs or heavy cables may necessitate additional pull boxes to reduce pulling tension. Accessibility: Pull boxes should be installed in accessible locations for maintenance and inspection.

By following these guidelines, electrical installations remain safe, code-compliant, and easier to maintain. Proper planning of pull box and conduit intervals also minimizes installation difficulties and ensures long-term reliability.
