Epon Aggregation Switch

Overview

EPON OLT 8 Port | High-Capacity Fiber Aggregation With 8 PON ports and 8 uplink interfaces (copper + SFP), this aggregation switch supports up to 512 ONUs.

Key Takeaways

An EPON aggregation switch consolidates traffic from multiple EPON access devices and forwards it to the core network, enhancing bandwidth, redundancy, and network efficiency.

Overview

An EPO

N aggregation switch is a network device designed to aggregate traffic from multiple EPON OLTs (Optical Line Terminals) or access switches and forward it to core switches or routers. It plays a critical role in fiber-to-the-home (FTTH) or fiber-to-the-building (FTTB) deployments, enabling ISPs and enterprises to manage high volumes of traffic efficiently. By combining multiple network connections into a single logical link, it reduces bottlenecks and ensures reliable data delivery.

Key Features

Link Aggregation: Supports protocols like LACP (Link Aggregation Control Protocol) and static link aggregation, allowing multiple physical ports to operate as a single logical interface. This increases bandwidth and provides failover in case of link failure.
Layer 2/3 Support: Operates at Layer 2 or Layer 3, enabling routing, forwarding, and traffic management across the network.

High Port Density: Modern EPON aggregation switches, such as the ET0816-H, offer multiple PON ports and uplink interfaces, supporting hundreds of ONUs (Optical Network Units) for large-scale deployments. Advanced Traffic Management: Includes features like QoS, multicast control, and traffic filtering, ensuring efficient and secure data flow. Diagnostics and Fault Management: Supports auto-registration, loop-back testing, and advanced diagnostics for rapid fault detection and resolution.

Deployment ScenariosEPON aggregation switches are typically deployed in high-traffic environments such as: ISP networks connecting multiple OLTs to the core networkEnterprise or campus networks consolidating access switchesData centers requiring high-throughput, redundant links They serve as a bridge between access and core layers, offloading processing from core switches while maintaining scalability and reliability. Standards and CompatibilityEPON aggregation switches comply with IEEE 802. 3ah EPON standards and may support 10G-EPON for next-generation high-speed services.

They are compatible with both copper and fiber uplinks, providing flexibility in network design.

Summary

In essence, an EPON aggregation switch is a vital component in modern fiber networks, enabling high-capacity, reliable, and scalable connectivity. It consolidates traffic from multiple access points, supports link aggregation for bandwidth and redundancy, and provides advanced traffic management to optimize network performance.
