Function of cable tray fixing plates

Overview

Splice plates are the most widely used method for connecting cable tray sections in straight runs. We fix them with nuts and bolts through the holes in the plate and the tray sides. A rung spacing of 6 to 9 inches (150 to 230 mm) is preferable when the cable tray cont d for instrumentation and control applications that require. The cable support lengths and fittings can basically be designed as cable trays, cable ladders or mesh cable trays, in which cables are routed. A cable tray system forms a structural framework. A cable tray is a structured mechanical support system used in the electrical wiring of buildings and other structures to organize and secure insulated power, control, and communication cables. Acting as a rigid pathway, the tray supports large networks of cables, preventing tangling and physical.
