Ground cable tray processing

Overview

This article provides a comprehensive framework that governs various aspects of cable tray installations, including the types of cables that are deemed acceptable for use, requirements for grounding and bonding, and stipulations regarding tray fill capacity. Cable tray may be used as the Equipment Grounding Conductor (EGC) in any installation where qualified persons will service the installed cable tray system. It involves connecting cable trays to the facility's grounding system, providing a low-impedance path for fault currents and protecting personnel. Cable tray wiring systems have excellent safety and dependability records. Why is bonding important in cable tray systems?

Bonding ensures electrical continuity between all parts of the cable tray system, preventing.
