How many centimeters is the opening of the cable tray tee

Overview

Cable Tray Fitting Cable Tray Fitting - Tee NOTE : Equal or un equal tees can be supplied. When ordering state widths W1xW2xW3 SHF30930SET12 | Tee for cabl.

Key Takeaways

Cable tray tees typically match standard tray widths and are often around 30–60 cm in length, depending on the system and manufacturer.

Standard Considerations

Cable tray tees are designed to connect three tray sections at a junction, and their length is generally determined by the width of the main and branch trays. Standard straight tray sections are commonly supplied in lengths of 3 m, 3. 6 m, 6 m, or 12 m, while tees are proportionally shorter to fit installation spaces and allow proper cable routing.

For example, a tee for a 6-inch (15 cm) wide tray may have a branch length of approximately 30–40 cm, while a tee for a 24-inch (60 cm) wide tray may have a branch length of 50–60 cm. The exact length can vary depending on: Tray type (ladder, perforated, solid bottom, wire mesh)Manufacturer specificationsInstallation constraints and cable fill requirementsCompliance with IEC 61537 or NEMA VE 1 standards Practical GuidanceMatch the tee width to the tray width: The branch of the tee should align with the width of the connecting tray to ensure smooth cable transitions. Allow for installation space: Ensure the tee length provides enough room for cable bending and routing without exceeding fill limits.

Check manufacturer datasheets: Companies like EzyStrut provide specific dimensions for their tees, which can be converted to centimeters for planning.

Conversion Example

A 12-inch wide tray tee → approximately 30 cm branch lengthA 24-inch wide tray tee → approximately 60 cm branch length These lengths are typical for commercial and industrial installations and provide a balance between structural support and cable management efficiency. Key Takeaway: While there is no single fixed length for all cable tray tees, 30–60 cm is a practical range for most standard tray widths, and the exact dimension should be confirmed with the manufacturer or project specifications to ensure compliance and proper cable routing.
