

How much does a ton of bridge truss cost in Paraguay

Overview

The price is driven by bridge type (private, municipal, or highway), span length, structural material, and access constraints.

Key Takeaways

The average cost of a ton of steel bridge truss in Paraguay is estimated around \$1,500–\$2,500, depending on specifications, material, and supplier.

Market Overview

In Paraguay, bridge trusses are primarily made of steel or iron, and prices are influenced by material quality, load capacity, span length, and compliance with international standards such as AASHTO or ISO. The Paraguayan bridge market has seen fluctuations in exports and imports, with steel bridge sections being a significant component of trade, particularly with Brazil. Export prices for steel bridge components in Paraguay have historically ranged in the \$1,500–\$2,500 per ton bracket, reflecting both material and fabrication costs.

Factors Affecting Cost

Material Type: Steel is generally more cost-effective per ton for heavy-duty, permanent bridges, while aluminum trusses are lighter but more expensive. **Design and Load Capacity:** Bridges designed for vehicular traffic (HS20, HS25) or long spans require higher-grade steel and more complex fabrication, increasing the per-ton cost. **Prefabrication and Customization:** Standardized trusses are cheaper, whereas custom dimensions, special coatings, or unique connection details raise costs.

Supplier and Volume: Bulk purchases often reduce the per-ton price, and local suppliers may offer lower costs compared to imported trusses.

Practical Considerations

Temporary vs Permanent: Temporary or modular trusses for construction access or disaster relief are generally cheaper per ton than permanent highway bridges.

Lifecycle Costs: Initial material cost is only part of the total cost; maintenance, durability, and ease of assembly also affect long-term expenses.

Regional Market Influence: Prices in Paraguay are influenced by regional steel availability, labor costs, and shipping logistics, particularly for imported components.

In summary, for planning purposes, budgeting \$1,500–\$2,500 per ton for steel bridge trusses in Paraguay is a reasonable estimate, with the final cost depending on material choice, design complexity, and supplier terms.
