

How to interpret the parameters of 10 Gigabit multimode fiber optic cables

Overview

10 Gigabit Ethernet Fiber Design Considerations This paper has introduced some basic fiber related concepts and outlined some of the key points to understand.

Key Takeaways

A 10 Gigabit multimode fiber optic cable typically uses OM3 or OM4 fiber, operates at 850 nm, and supports distances up to 300–400 meters depending on fiber type and network design. Fiber Type and Core Size 10GbE multimode fiber cables are usually OM3 or OM4 types, both with a 50-micrometer core diameter optimized for laser transmission using VCSEL light sources at 850 nm. OM3 supports up to 300 meters, while OM4 extends the reach to 400–550 meters for 10GbE links.

Wavelength

The standard operating wavelength for 10GBASE-SR multimode fiber is 850 nm, which is compatible with short-reach SFP+ transceivers. Modal Bandwidth OM3: 2000 MHz·km OM4: 4700 MHz·km Higher modal bandwidth allows for longer distances and better signal integrity at 10 Gbps.

Connector Type

Multimode 10GbE cables typically use duplex LC connectors, which are compact and widely supported by SFP+ modules.

Link Power Budget and Loss

The link power budget is determined by the difference between transmitter power and receiver sensitivity, accounting for fiber attenuation, splice losses, and connector losses. Typical multimode fiber attenuation is around 2.5 dB/km at 850 nm, and the total channel insertion loss must remain within the 10GbE standard limits.

Transceiver Compatibility 10GbE multimode fiber is commonly paired with 10GBASE-SR SFP+ transceivers, which are hot-pluggable and optimized for short-reach, high-speed connections in data centers and enterprise networks. Mode-conditioning patch cords may be required for older fiber types like OM1 or OM2 to ensure proper signal quality.

Parameter	OM3	OM4
Core Diameter	50 μ m	50 μ m
Wavelength	850 nm	850 nm
Modal Bandwidth	2000 MHz·km	4700 MHz·km
Max 10GbE Distance	300 m	400–550 m
Connector	Duplex LC	Duplex LC
Typical Attenuation	2.5 dB/km	2.5 dB/km

These parameters ensure high-speed, low-latency, and reliable 10GbE connectivity over short to medium distances, making OM3 and OM4 multimode fibers ideal for data centers, enterprise networks, and high-density switch environments.
