Huawei A51 Optical Module Parameters

Overview

How to View Optical Module Parameters If an optical module is installed in a running router, you can run the display transceiver command to view parameters.

Key Takeaways

The Huawei A51 optical module is a 100G coherent DWDM OTN module designed for high-speed, long-distance transmission with full diagnostic monitoring capabilities.

Key Specifications

Module Type: 100G wavelength division OTN optical module, coherent DWDM (Dense Wavelength Division Multiplexing) compatible, model TN12C1CFPA51-03033JRX. Transmission Rate: 100 Gigabit per second (100G) for high-capacity networks. Fiber Type: Single-mode fiber (SMF), optimized for long-distance optical transmission.

Wavelength: Supports DWDM channels; exact center wavelength depends on the specific channel configuration. Transmission Distance: Designed for long-haul applications; typical distances can range from tens to hundreds of kilometers depending on fiber type and network design. Connector Type: LC connectors are commonly used for Huawei optical modules.

Digital Diagnostic Monitoring (DDM): Yes, the module supports real-time monitoring of temperature, voltage, bias current, and optical power levels. Receive Optical Power (Rx): Monitored in dBm; thresholds are configurable, e.g., default high/low thresholds for Rx power are typically around 1. 00 dBm and -11.

90 dBm. Transmit Optical Power (Tx): Monitored in dBm; default high/low thresholds are typically around 1. 00 dBm and -9.

30 dBm. Vendor and Certification: Huawei-certified modules ensure compatibility with Huawei switches and routers; non-certified modules may trigger alarms or be unsupported. Manufacturing Information: Includes serial number, manufacturing date, and vendor details for traceability.

Viewing and Monitoring Parameters

To check the parameters of a Huawei A51 optical module installed in a device: Use the command display transceiver to view all optical ports. Use display transceiver interface interface-type interface-number to view a specific port's module information. For detailed diagnostic data, add the verbose parameter: display transceiver interface interface-type interface-number verbose.

Parameters available include wavelength, transmission distance, fiber type, current Rx/Tx power, temperature, voltage, and bias current. These features allow network engineers to monitor module health, ensure proper operation, and troubleshoot optical link issues efficiently.

Summary

The Huawei A51 optical module is a high-performance 100G DWDM OTN module suitable for long-distance single-mode fiber networks. It provides full digital diagnostic monitoring, configurable power thresholds, and is fully certified for Huawei equipment, making it ideal for high-speed backbone and metro network deployments.
