Icon corresponding to optical module 26

Overview

Optical Icons & Symbols Vector icons in SVG, PSD, PNG, EPS and ICON FONT. Module Icons & Symbols Vector icons in SVG, PSD, PNG, EPS and ICON FONT. The Most.

Key Takeaways

There is no specific publicly documented icon labeled "optical module 26," but standard optical module symbols can be used to represent it in diagrams.

Standard Optical Module Icons

Optical modules are typically represented in network diagrams or schematics using standardized symbols that indicate their function as transceivers or photo modules. Common representations include: Rectangular or square blocks with labels such as "SFP," "XFP," or "Optical Module" to indicate the type of transceiver. Connector symbols showing the optical interface, often with a small circle or line representing the fiber connection.

Photo module symbols for optical receivers or transmitters, sometimes including arrows to indicate signal direction.

Usage in Network Diagrams

When documenting or visualizing optical modules in diagrams: Use a generic optical module icon if a specific numbered icon (like 26) is not available. Label the icon clearly with the module number or interface name to avoid confusion. Include directional arrows or annotations for transmit (Tx) and receive (Rx) paths if needed.

Tools and Resources

Flaticon provides a collection of optical and network icons in SVG, PNG, and other formats for diagramming purposes.

Ki

Cad symbols include optical interface representations that can be adapted for optical modules. For vendor-specific diagrams (e.g., Huawei, SEL ICON), the network management software may provide proprietary icons for each module slot, which can be used to represent module 26 in the interface. In summary, while there is no dedicated "optical module 26" icon in public resources, you can use standard optical module symbols and label them appropriately to represent module 26 in diagrams or documentation.
