Irregular-shaped cable tray models and specifications

Overview

Cable Tray Design and Components GuideTables list standard sizes and specifications for straight and bent cable trays, including width, height, thickness.

Key Takeaways

Irregular-shaped cable trays include bends, tees, crosses, and custom configurations designed to route cables around obstacles while maintaining mechanical support and compliance with standards.

Types of Irregular-

Shaped Cable Trays

Horizontal and Vertical BendsUsed to change the direction of cable runs horizontally or vertically. Available in standard angles (30°, 45°, 60°, 90°) and custom radii to maintain minimum bend radius for cables. Can be ladder, ventilated, or solid-bottom trays depending on cable protection requirements.

Tees and Crosses

Allow branching of cable runs from a main tray to multiple directions. Tee trays connect three runs, while cross trays connect four runs. Typically used in data centers, industrial plants, or complex electrical layouts.

Reducer and Transition Trays

Facilitate changes in tray width or type (e.g., ladder to solid or ventilated tray). Ensure smooth cable transition and maintain load capacity.

Custom and Modular Shapes

Wire mesh or modular trays can be cut and bent on-site to fit irregular spaces.

Apex

Tray and Legrand provide CAD files and manuals for designing custom configurations.

Materials and Finishes

Steel (galvanized, powder-coated, or stainless): High mechanical strength, suitable for heavy-duty applications. Aluminum: Lightweight, corrosion-resistant, ideal for indoor and outdoor environments. Fiberglass Reinforced Plastic (FRP): Non-conductive, corrosion-resistant, used in chemical or wet environments.

Specifications and Standards

Load Class: Defines the maximum load the tray can carry over a specific support span. Rung Spacing: Typically 150–230 mm for ladder trays to support cables and maintain bend radius. Compliance: CE marking, UL, NEMA, and ISO standards ensure safety, mechanical integrity, and environmental compliance.

Covers: Solid or ventilated covers protect cables from dust, heat, or electromagnetic interference. Resources for Design and InstallationCAD Models and Manuals: ApexTray and Legrand provide downloadable CAD files and technical guides for irregular-shaped trays. Technical Guides: ABB and Hubbell offer detailed specifications, installation instructions, and material selection guidance.

Installation Tips: Ensure proper support, maintain minimum bend radius, and select appropriate tray type for cable type and environment. Irregular-shaped cable trays are essential for complex installations where standard straight trays cannot accommodate routing requirements. Selecting the correct type, material, and configuration ensures mechanical support, cable protection, and compliance with safety standards.

Cable Tray Design and Components Guide

Tables list standard sizes and specifications for straight and bent cable trays, including width, height, thickness, materials, and finishes. Drawings show different bent cable tray types like 90 degree and

GUIDE CABLE TRAYS TECHNICAL

NEMA VE 1-2017 Specifies requirements for metal cable trays and associated fittings designed for use in accordance with the rules of Canadian Electrical Code, Part I and the National Electrical Code®

Product Catalogue Cable Management Solutions

With over 20 years of experience T&B Cable Tray provides a complete solution in cable management systems including design, manufacturing and technical support by offering a complete solution for

Download Cable Tray Resources | ApexTray Official Site

Visit our Download Center to access ''Download Cable Tray'' resources, including detailed manuals, CAD files, and specifications. Get all the essential tools and

CABLE TRAY SYSTEMS GUIDE

The design and cost of the cable tray is greatly affected by this designation. In order to determine the most appropriate and economical system, a class should be selected that reflects the actual total

Cable tray

ABB designs and manufactures cable tray systems, including perforated tray, cable ladder, channel tray and strut (metal framing), directly from production facilities in Canada and Saudi Arabia.

Cable Tray Systems | Cable Management Trays | Metsec

Industrial cable management, enhanced by our UK-manufactured cable trays, delivers optimised safety, maximised efficiency, and increased productivity within your industrial operations.

Resources for Cable tray and ladder systems

Our cable tray design considerations guide details key factors to consider when designing cable tray systems for industrial and commercial applications. Browse or download the cable tray catalog for
