Key Takeaways

High-speed DAC (Direct Attach Copper) SFP/SFP+ cables are widely available in Lebanon for short-distance, low-latency network connections, compatible with Cisco, MikroTik, Ubiquiti, and other enterprise equipment. OverviewDAC cables are passive or active copper cables that connect SFP/SFP+ ports directly between devices such as switches, servers, and storage units. They are ideal for intra-rack or adjacent-rack connections due to their low latency, low power consumption, and cost-effectiveness compared to optical SFP modules.

Typical speeds range from 1G to 10G for SFP/SFP+, with higher-speed options available in QSFP+ and QSFP28 form factors.

Recommendations

Use DA

C cables for short-range connections within racks or between adjacent racks to reduce latency and power usage. Choose cable length carefully to avoid signal degradation; passive DACs are typically limited to 7 meters. Verify vendor compatibility with your network equipment; most Lebanese suppliers test and certify their DAC cables for Cisco, MikroTik, Ubiquiti, and other major brands.

For longer distances or inter-building links, consider active DAC or AOC optical cables. These options ensure high-speed, reliable, and cost-effective connectivity for enterprise networks, data centers, and ISP infrastructure in Lebanon.
