Level 3 portable distribution box

Overview

Movable Portable Power Distribution Box, Plastic 3 This box may be powered from a generator, a panel or from a larger box and is Portable Power Distributi.

Key Takeaways

A Level 3 portable distribution box is a robust, multi-phase power distribution unit designed for temporary or mobile applications, offering high amperage capacity, safety features, and portability.

Overview

A Level 3 portable distribution box is typically used to distribute electrical power from a generator, main panel, or larger distribution system to multiple devices or circuits. It is ideal for construction sites, outdoor events, industrial maintenance, and emergency power setups. These boxes are designed to handle higher power loads and often feature three-phase power distribution, making them suitable for heavy-duty applications.

Key Features

Durable Construction: Many Level 3 boxes use heavy-duty molded rubber or PE materials, providing resistance to shock, impact, corrosion, and harsh weather conditions. Some models are rated IP67, ensuring protection against dust and water ingress. Safety and Compliance: Circuit breakers are typically included under hinged lids for enhanced safety.

Units are often cULus listed and comply with UL 1640 standards, ensuring safe operation in temporary or mobile setups. Portability: Designed for easy transport and setup, these boxes are often stackable, compact, and equipped with elevated bases to keep receptacles above ground level. Adjustable Output: Some models, like the Load Master™ Series, feature adjustable current ratings and multiple circuit breakers (1, 3, or 4), allowing adaptation to changing power requirements.

Versatility: Level 3 boxes can power lights, appliances, computers, audio-visual systems, and industrial equipment, making them suitable for a wide range of applications.

Applications

Entertainment and Events: Powering lighting rigs, sound systems, and AV equipment. Industrial and Construction Sites: Supplying power to machinery, tools, and temporary workstations. Emergency and Maintenance: Providing reliable temporary power during outages or maintenance operations.

Customization

Manufacturers like J&HW Group and suppliers on platforms like Alibaba offer customizable Level 3 distribution boxes, allowing users to specify socket types, amperage, phase configuration, and enclosure materials to meet specific operational needs.

Summary

A Level 3 portable distribution box is a high-capacity, safe, and portable solution for distributing electrical power in temporary or mobile environments. Its durable construction, adjustable outputs, and compliance with safety standards make it suitable for demanding applications across industrial, entertainment, and emergency sectors.
