Monaco Single-Rack Micro-Module Data Center Dimensions

Overview

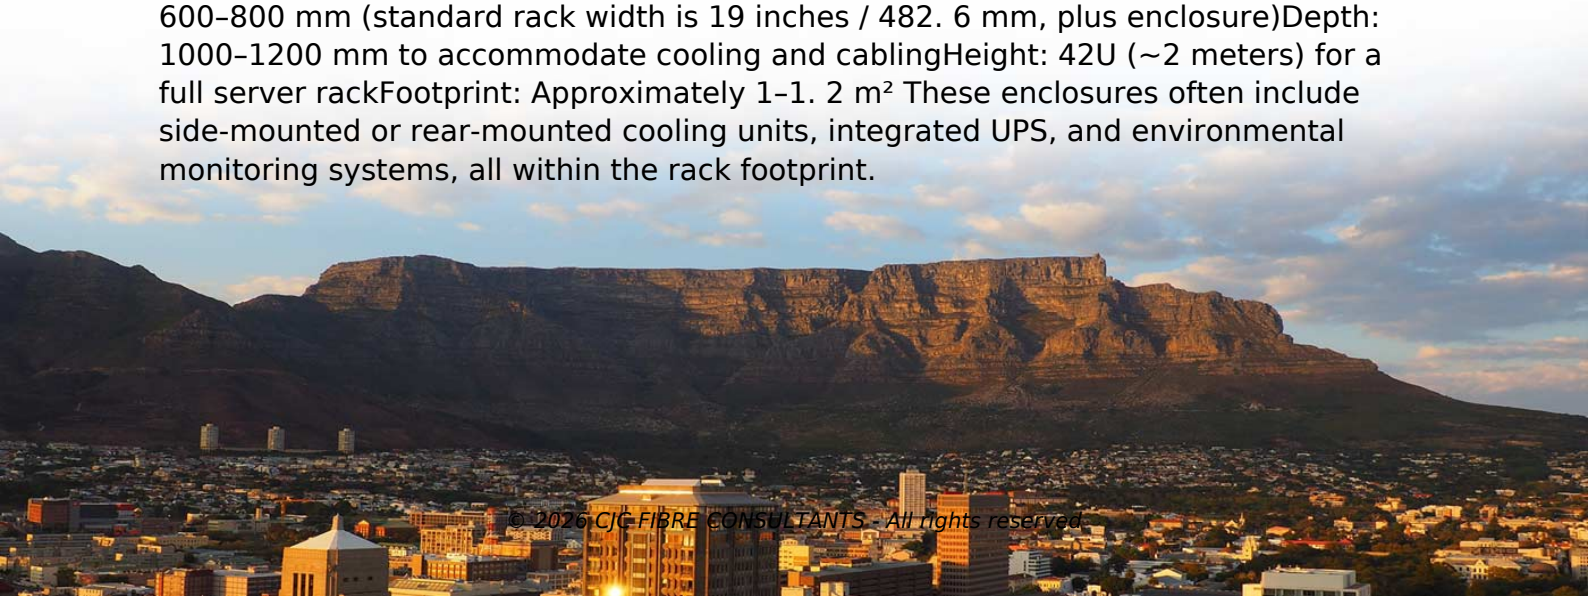

Micro Data Center Delta's modular datacenter solution offers a datacenter environment that provides safe equipment operations within the racks, and support.

Key Takeaways

A Monaco Single-Rack Micro-Module Data Center typically fits within a standard 42U server rack footprint, approximately 600mm wide by 1000mm deep, with a height of 2 meters, though exact dimensions may vary by manufacturer. OverviewMonaco's micro-module data centers are designed to integrate all essential subsystems—power, cooling, monitoring, and security—within a single rack, allowing deployment in limited spaces while maintaining high availability and Tier III standards. These solutions are ideal for small IT loads (under 20kVA) and compact environments, such as regional offices or edge computing sites.

Typical Dimensions

While Monaco-specific single-rack modules are not explicitly listed, industry-standard single-rack micro data centers generally have the following dimensions: Width: 600–800 mm (standard rack width is 19 inches / 482. 6 mm, plus enclosure)Depth: 1000–1200 mm to accommodate cooling and cablingHeight: 42U (~2 meters) for a full server rackFootprint: Approximately 1–1. 2 m² These enclosures often include side-mounted or rear-mounted cooling units, integrated UPS, and environmental monitoring systems, all within the rack footprint.

Features Relevant to Monaco Deployments

Redundant power and cooling to meet Tier III requirements Cold aisle containment with controlled temperature (~24°C) and humidity Integrated monitoring for temperature, humidity, smoke, and leak detection Compact footprint suitable for indoor deployment in offices or telecom facilities Practical ConsiderationsWhen planning deployment, consider additional clearance for airflow, maintenance, and cabling, which may add 0. 5–1 meter around the rack. Monaco's micro-module solutions are designed for quick installation and modular expansion, allowing multiple racks to be linked if higher IT loads are required.

In summary, a single-rack micro-module data center in Monaco will generally occupy a 2-meter tall, 0. 6–0. 8 meter wide, and 1–1.

2 meter deep footprint, with integrated power, cooling, and monitoring systems, optimized for small-scale, high-availability IT deployments.
