PE grounding depth of distribution box

Overview

26 mm 2 (10 AWG) ground wire must be used, and in all other markets a 6 mm 2 must be used. the electrical cabinet, junction box, control desk, etc. the main grounding conductor from customer's power distribution panel as well as the other conductors of the grounding system outside of. Improper grounding or earthing of “Distributed Control Systems (DCS)” or “Power Electronic Systems (PES)” can result in either mal-operation of the system / controller or failure of electronic control cards or sometimes even the embedded control software getting erased. The grounding "bus" (grounding bus, PE bus) in the box is directly connected to the power ground wire or grounding system; 2. Each DISTRIBUTION BOX and controller must be grounded. Grounding of the units: Attach a ground wire from one of. Regarding the issue of PE grounding within the distribution blocks electrical series, larger capacity models will adopt a method of connecting PE to a separate grounding busbar.
