Senegal delivery period integrated container rack high density

Overview

Strengthening West Africa's Supply Chains with Maersk's first. This positioning enables more efficient distribution within Senegal and facilitates cross.

Key Takeaways

Senegal offers modern, high-density integrated container storage and logistics solutions with efficient delivery periods through facilities like Maersk's Dakar warehouse and DP World Dakar port.

High-

Density Storage FacilitiesMaersk's new warehouse in Dakar provides 5,100 m² of indoor storage with 7,036 pallet positions and 500 m² of outdoor storage, supporting high-density containerized storage and integrated rack systems for various commodities, including fast-moving consumer goods, retail, and technology products. The facility uses advanced Warehouse Management Systems (WMS) and Electronic Data Interchange (EDI) for real-time inventory tracking, enabling efficient handling of high-density racks and containerized goods. The Port of Dakar also supports containerized cargo with streamlined quayside operations, deep-water access, and advanced cargo handling, reducing vessel waiting times to zero and ensuring rapid transfer from ship to storage or onward transport.

The port's infrastructure allows for efficient intermodal transport, connecting Senegal to regional and global markets.

Delivery Periods

Delivery timelines in Senegal depend on the integration of port operations and warehouse logistics.

With D

P World Dakar's window berthing and optimized quay operations, container unloading and customs clearance are expedited, typically reducing delays compared to regional averages. Maersk's integrated warehouse further accelerates distribution within Senegal and to neighboring West African countries, leveraging its proximity to the port (within 10 km) and value-added services like palletization, order processing, and packaging. Local logistics providers such as INTEGRAL LOGISTIX offer end-to-end solutions, including LCL consolidation, heavy cargo handling, and customs clearance, which can further optimize delivery periods for high-density container shipments.

Additional Storage Capacities

The Port Autonome de Dakar provides extensive storage options, including 98,351 m² of covered hangars, 216,309 m² of outdoor storage, and 324,208 m² of container deposition areas, supporting large-scale, high-density container storage. Cold storage facilities of 15,000 m² are also available for temperature-sensitive goods. SummarySenegal's logistics ecosystem combines high-density integrated container racks, advanced warehouse management, and efficient port operations, enabling rapid delivery and distribution.

Companies can leverage Maersk's warehouse, DP World Dakar port, and local logistics providers to optimize supply chains, reduce lead times, and handle large volumes of containerized goods efficiently.
