Single-sided variable diameter cable tray

Overview

For example, the first selection issue is the environment to which the cable tray will be subjected. This selection will lead to the best material for your application.

Key Takeaways

Single-sided variable diameter cable trays are designed to support cables of varying diameters on one side, with specifications governed by material, load capacity, rung spacing, and compliance with NEMA, NEC, and UL standards. OverviewSingle-sided variable diameter cable trays are structural systems used to support and route insulated conductors and cables. They are typically designed to accommodate cables of different diameters on one side, allowing flexibility in installations where cable sizes vary along the tray length.

These trays can be fabricated in ladder, trough, solid-bottom, or channel types, depending on the application and environmental requirements (Eaton specification document).

Materials and Construction

Steel: Hot-rolled or cold-rolled carbon steel, often zinc-coated (ASTM A123, A653, A1011, A1008, B633) for corrosion resistance. Aluminum: Lightweight, corrosion-resistant, often using 5000 or 6000 series alloys; can be painted for aesthetics or specific applications. Wire Mesh (Basket Tray): High-strength steel wire for light power, telecom, or fiber optics, providing ventilation and easy cable management.

Dimensions and Load Considerations

Rung Spacing: Typically 6–12 inches (150–300 mm), depending on cable size and type. Smaller multi-conductor cables use 6–9 inches, while large power conductors use 9–12 inches to maintain minimum bend radius. Side Rails and Rungs: Cross-sectional properties such as Section Modulus (Sx) and Moment of Inertia (Ix) should be provided by the manufacturer to ensure structural integrity.

Variable Diameter Accommodation: The tray design allows for different cable diameters along the same tray, ensuring proper support and spacing without damaging conductors. Standards and ComplianceNEMA VE 1: Metallic cable tray systems compliance.

NE

C Article 392: Installation and construction requirements for cable trays.

U

L Classification: Products must be UL listed and labeled.

NFP

A 70B: Recommended practices for electrical equipment maintenance.

AST

M Standards: For steel and coating specifications, ensuring durability and corrosion resistance.

Installation Guidelines

Deliver and store trays in original packaging to prevent damage. Ensure proper support spacing and alignment according to manufacturer recommendations. Maintain minimum bend radii for cables exiting the tray to prevent conductor damage.

Use appropriate fittings such as bends, tees, elbows, and drop-outs to accommodate routing changes.

Additional Considerations

Ventilation: Ladder and ventilated trays prevent moisture accumulation and debris buildup, improving cable longevity. Environmental Resistance: Aluminum and coated steel trays provide corrosion resistance in industrial or outdoor environments. Load Ratings: Must be verified based on cable weight, span length, and installation conditions.

Single-sided variable diameter cable trays provide a flexible, standards-compliant solution for routing cables of varying sizes while maintaining structural integrity and safety. Proper selection of material, rung spacing, and compliance with NEMA, NEC, and UL standards ensures reliable performance in commercial and industrial installations.

CableTray Book English

For example, the first selection issue is the environment to which the cable tray will be subjected. This selection will lead to the best material for your application.

Cable Tray Dimensions Guide: Standard Sizes, Tray Types & Sizing

Explore standard sizes by tray type, understand width and depth limits, and see how to calculate and choose compliant cable tray sizes for real projects.

GUIDE CABLE TRAYS TECHNICAL

NEMA VE 1-2017 Specifies requirements for metal cable trays and associated fittings designed for use in accordance with the rules of Canadian Electrical Code, Part I and the National Electrical Code®

Cable Tray Technical Guide A practical guide to product selection and ...

Cable tray is considered to be a system. It must provide continuous support for cables, and the electrical continuity of the cable tray system must be maintained.

Cable Trays | McMaster-Carr

Choose from our selection of cable trays, including over 850 products in a wide range of styles and sizes. Same and Next Day Delivery.

Cable Tray Sizing Calculator | IEC 61537 & NEC 392

Use this cable tray sizing calculator to check fill %, select tray size, and comply with IEC 61537 & NEC 392 with formulas, example and checklist.

B-Line series Cable Tray Design Considerations

Available in 3, 4, and 6-inch widths with ventilated or solid bottoms, channel cable tray is ideal for smaller instrumentation cables and cable tray runs involving a small number of cables.

Cable Trays
