Standards for Level 2 Explosion-proof Distribution Boxes

Overview

This guide covers every major explosion proof ratings system with a facility matrix, decision workflow, and real-world installation examples.

Key Takeaways

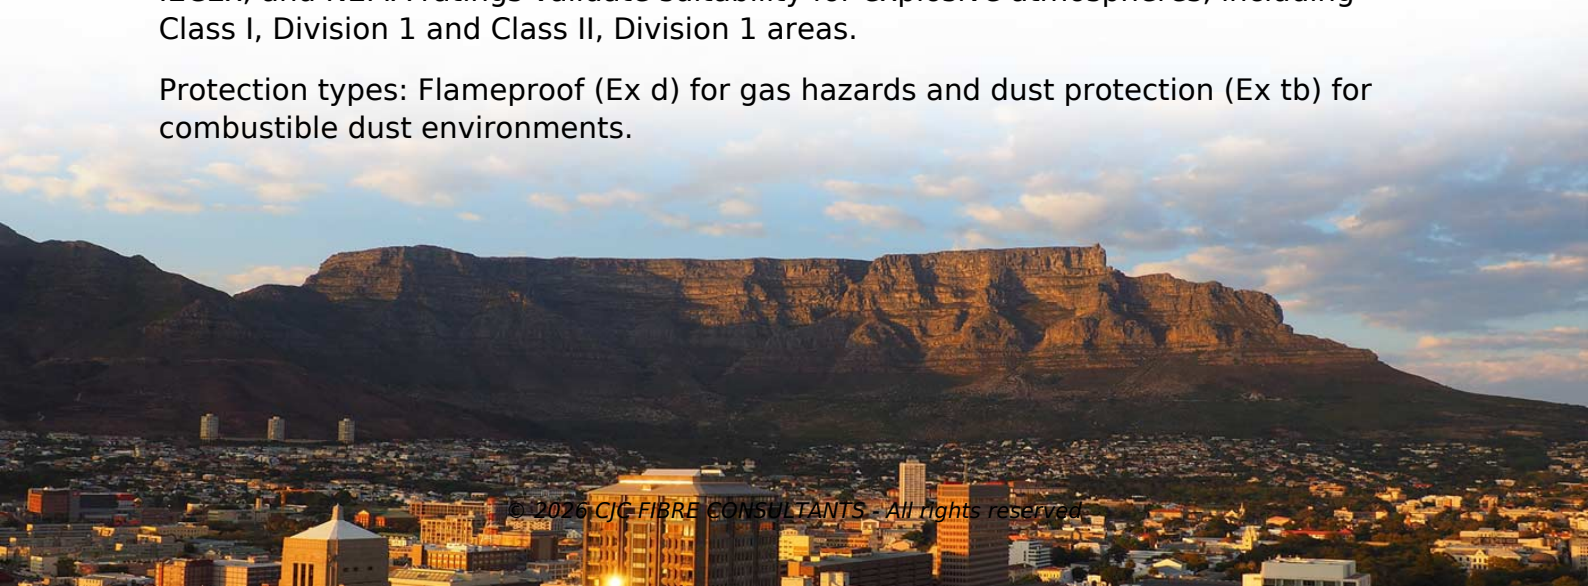

Level II explosion-proof distribution boxes must comply with flameproof (Ex d) and dust protection (Ex tb) standards, use corrosion-resistant materials, and meet national and international certifications such as GB7251, ATEX, IECEx, and NEMA.

Certification and Compliance

Level I

I explosion-proof distribution boxes are designed for hazardous environments such as coal mines, petroleum, petrochemical plants, and textile industries. They must comply with: National standards: GB7251 for design and production requirements, ensuring electrical components maintain proper clearance, creepage distance, and withstand voltage under normal use conditions. International certifications: ATEX, IECEx, and NEMA ratings validate suitability for explosive atmospheres, including Class I, Division 1 and Class II, Division 1 areas.

Protection types: Flameproof (Ex d) for gas hazards and dust protection (Ex tb) for combustible dust environments.

Material and Construction Requirements

Enclosure materials: Stainless steel (304 or 316L), aluminum, or copper-free aluminum for corrosion resistance and mechanical strength. Box thickness: Minimum 4. 0 mm for stainless steel enclosures.

Design features: Specialized hinges to protect flameproof joints, modular construction for flexible installation, and robust sealing to prevent ingress of dust or gas. Electrical components: Must comply with relevant standards, maintain proper insulation, and be securely mounted with galvanized fasteners.

Electrical and Wiring Standards

Component selection: Includes MCCBs, MCBs, AC contactors, relays, PLCs, fuses, soft starters, frequency converters, and other certified devices. Wiring practices: Secondary wiring should use black wire with proper casing; conductors in measuring instruments must be enameled; wiring should be neatly bundled and secured with nylon tape. Cable entry: Standard Mx 1.

5 plugs or NPT plugs; DQM-II (Ex d) or DQM-III (Ex d) cable glands are recommended.

Environmental and Safety Considerations

Operating zones: Suitable for Zone 1, Zone 2, Zone 21, Zone 22, or Class I and Class II, Division 1 hazardous areas. Temperature classes: T6 to T41 for gas, T80°C to T130°C for dust, ensuring surface temperatures remain below ignition points. Ingress protection: IP66 or IP66/67 with O-ring seals; NEMA Types 4, 4X, 7, and 9 for dust and water resistance.

Maintenance: Regular inspection at least annually, more frequently in high-risk areas, to ensure seals, wiring, and components remain intact.

Summary

Level I

I explosion-proof distribution boxes must integrate robust materials, certified components, flameproof and dust-proof designs, and strict adherence to national and international standards. Proper installation, wiring, and maintenance are critical to ensure safety in hazardous environments, prevent ignition of flammable gases or dust, and comply with legal and industrial safety requirements.

Explosion Proof Ratings: NEC, ATEX & IECEx Guide

This guide covers every major explosion proof ratings system with a facility matrix, decision workflow, and real-world installation examples. When

Control Panels & Distribution Boards

To provide and protect Low Voltage Power Distribution networks from harsh environmental conditions and explosive atmospheres common to the onshore

Hazardous Area Electrical Enclosures: Types, Ratings

Learn about hazardous area electrical enclosures, enclosure types, material selection, IP/NEMA ratings, and compliance requirements for explosive

Requirements for Explosion-proof Distribution Boxes and Panels

This guide will explore the key features, benefits, types, and selection criteria for explosion-proof distribution panels to help you make informed decisions when choosing one for your facility.

Terminal and Junction Boxes (Ex e, Ex i, Ex op) | Explosion Protection

They are certified in accordance with international explosion protection standards such as ATEX, IECEx, NEC, and others for safe and reliable signal and power distribution in Zone 1, Zone 2, Zone 21, Zone

Hazardous Location Enclosures | nVent HOFFMAN

Choose from an extensive line of enclosures to protect electrical components in environments subject to potentially hazardous atmospheres created by vapor or dust. Includes ATEX- and IECEX-certified

2026 Top 10 Explosion-Proof Distribution Box Manufacturers in China

IICT6 grade wall mounted stainless steel material BXM (D) 51 explosion-proof lighting power distribution box, protection level IP65, hazardous location 1, 2, 3, enclosure made of 304 stainless

Explosion Proof Junction Box Types, Prices

Learn about explosion proof junction boxes—pricing, sizes, certifications, and installation tips for electricians and engineers. Shop certified

Explosion-Proof Lights, Explosion-Proof Junction Box,

Shenhai: With 25 years of expertise, we lead in manufacturing high-quality explosion-proof lights, junction boxes, and pipe fittings for hazardous
