Three distribution boxes on site

Overview

The power distribution from the power input point to the end electrical equipment needs to go through three levels of Powbinet. This architecture uses the main distribution box as the primary hub, with several sub-distribution boxes at lower levels, forming a tree-like. Temporary power supply management at construction sites adopts a tiered distribution model. The complete set of products can form a complete three-level. A distribution box, three-phase technology, applied in the field of multi-level three-phase distribution boxes on construction sites, can solve the problems of long time and complicated operation, and achieve the effects of improving stability, convenient moving and conveying, and ensuring the. The three-level distribution system refers to a system that distributes electric power through three levels of distribution devices from the incoming power line at the construction site to the electrical equipment. This device makes sure power goes to big machines safely and quickly. SMART DISTRIBUTION BOXES FOR FLEXIBLE BUILDINGS. Wieland is your experienced and reliable partner for efficient, pluggable and decentralized electrical installation.
