Unsupported cable trays in the workshop

Overview

This guide discusses common cable tray problems, from loosening and corrosion to grounding issues and installation errors, along with strategies for prevention and resolution. It also offers future-ready ideas, troubleshooting guidance, and useful suggestions to guarantee your cable systems. NEC Article 392 outlines the key rules for installing and maintaining industrial cable tray systems. These systems, made from metal or plastic, are open structures designed to support electrical conductors, ensuring proper organization and safety. Whether installed as stainless steel cable trays, these components offer durable and flexible solutions for routing cables safely. All illustrations, descriptions and technical information included in this document are provided as indications and can cable trays are equivalent. The mechanical and electrical characteristics, tests, certifications, overall quality management, recommendations mentioned. This totally seems to be a fever dream, but I thought during my apprenticeship i saw a video of a cable in a cable tray snapping or jumping up from being over loaded and it was shown because it was giving an example of the importance of supporting conductors to the tray. In this blog, we'll focus on support spacing for perforated, ladder and wire mesh cable trays and reference the National Electrical Code (NEC).
