Various styles of cable tray fixing brackets

Overview

Decoding Cable Tray Support Structures: Tips and InsightsDiscover efficient cable tray support structures for optimal cable management. Learn about hanger.

Key Takeaways

Cable tray fixing brackets come in various styles including wall-mounted, ceiling-mounted, floor-mounted, stand-off, G hanger, and trapeze support brackets, each designed for specific installation needs and load requirements. Common Bracket StylesWall-Mounted Brackets: These are widely used to secure cable trays directly to walls, keeping trays stable and preventing sagging. They are simple to install and adjust, making them ideal for areas with limited space or where trays need to be close to the wall.

Ceiling-

Mounted Supports: Suspended from the ceiling using rods or hangers, these brackets allow cable trays to be elevated, keeping cables organized and accessible while maintaining ventilation. They are suitable for large open areas or industrial settings.

Floor-

Mounted Bases: Used when wall or ceiling mounting is not feasible, these brackets secure trays to the floor. They are common in industrial environments where heavy-duty cables require robust support. Suspended Rod Mounting: Threaded rods are used to suspend trays from ceilings, providing precise height adjustment and easy access for maintenance.

This method is particularly effective for long horizontal runs.

Surface-

Mounted Fixing: Brackets or clips attach trays directly to surfaces, often used for heavy-duty or industrial installations where trays must remain accessible. Specialized Bracket TypesStand-Off Brackets: Provide clearance between the tray and wall or surface, available in sizes from 50mm to 300mm. They are ideal for installations requiring airflow or cable separation.

G Hanger Support Brackets: Designed for overhead support of trays or baskets, typically available in 100mm and 150mm sizes, offering strong support for suspended runs. Trapeze Support Brackets: Pre-assembled for quick installation, these brackets support wide trays with various drop lengths, commonly used in industrial or commercial applications for heavy cable loads.

Materials and Durability

Brackets are commonly made from pre-galvanized steel, hot-dipped galvanized steel, or stainless steel (A316/A4), ensuring corrosion resistance and long-term durability. Selection depends on environmental conditions and load requirements.

Accessories

Additional accessories like mounting clamps, tray hangers, and cable tie mounts enhance stability and organization, ensuring cables remain secure and properly routed. Choosing the right bracket style depends on installation location, cable weight, tray type, and accessibility requirements, ensuring a safe, organized, and durable cable management system.
