

What is the full configuration of a 576 optical distribution box

Overview

FDH5000 cabinet with 576 ports, LC/APC, no splitters, dry dielectric flat ribbon, 100 ft stub, 144F feeder, 288F distribution, pad mount with 8 in riser.

Key Takeaways

A 576-port optical distribution box typically supports high-density fiber distribution with modular, pad-mountable, weather-resistant design, accommodating both LC and SC connectors and allowing flexible network expansion.

General Overview

A 576-port Optical Distribution Box (ODF/FDH) is designed for high-density fiber distribution in outdoor or outside plant (OSP) environments. These cabinets are suitable for FTTx networks, Multi-Dwelling Units (MDU), and Single-Family Units (SFU), providing secure, weather-tight housing for fiber interconnections and splicing.

Fiber Capacity and Connectors

Distribution Ports: 576 fiber adapters for subscriber connections. Feeder/Pass-

Through Ports: Typically 48 feed or pass-through adapters. Connector Types:

Supports LC/APC or SC/APC connectors, depending on the model.

Splice Capacity: Can store up to 576 splices, with modular options for expansion.

Modularity and Expansion

Stackable Design: Some models, like Corning OptiTect® HD, allow stacking of 288- or 576-fiber cabinets to defer capital investment until network growth requires more ports. **Modular Cassettes:** Supports field-installable SC APC or LC APC cassettes, enabling flexible feeder-to-distribution ratios and cross-connect configurations. **Splitter Compatibility:** Compatible with LS Series splitters or multiple splitter modules for incremental growth.

Physical and Environmental Features

Mounting Options: Pad-mountable or vault installation; some models include an 8-inch riser for pad mounting. **Construction:** Powder-coated aluminum or durable weather-resistant materials for outdoor use. **Access:** Dual front and rear doors with quarter-turn locks and padlock hasps for security.

Grounding: Equipped with grounding bus bars and multiple grounding studs. **Installation:** Designed for quick deployment, often installable by a single technician.

Network Applications

Use Cases: Ideal for FTTx, broadband distribution, and general network infrastructure applications. **Flexibility:** Supports pre-terminated and field-terminated fibers, allowing easy integration into existing networks. **Scalability:** Cabinets can grow from 288 to 576 or even 896 ports, depending on network demand.

Summary

A 576-port optical distribution box provides a high-density, modular, and secure solution for fiber distribution. Key features include LC/APC or SC/APC connectors, modular cassettes, splitter compatibility, pad-mountable design, and environmental protection, making it suitable for both current deployment and future network expansion.
