What type of plastic is used in optical fiber cables

Overview

A complete guide to the raw materials of fiber optic cables—optical fibers, PBT tubes, FRP rods, aramid yarn, steel armoring, HDPE/LSZH jackets, and more.

Key Takeaways

Plastic optical fiber cables typically use PMMA (acrylic) for the core, fluorinated polymers for the cladding, and acrylate coatings for protection.

Core Material

The central part of a plastic optical fiber, known as the core, is usually made from polymethyl methacrylate (PMMA, acrylic).

PMM

A comprises about 96% of the fiber cross-section in standard 1 mm diameter fibers and is chosen for its transparency, flexibility, and ability to transmit light efficiently over short distances. High-performance fibers may also use perfluorinated polymers such as CYTOP for improved transmission and lower attenuation.

Cladding Material

Surrounding the core is the cladding, which has a lower refractive index to ensure total internal reflection. In plastic optical fibers, the cladding is typically made from fluorinated polymers. These materials provide a high refractive index difference between the core and cladding, enhancing light guidance while maintaining flexibility and mechanical robustness.

Protective Coatings

To protect the fiber from mechanical damage, acrylate polymers or polyimide coatings are applied over the cladding. These coatings do not affect the optical properties but provide durability, resistance to environmental stress, and ease of handling during installation. Dual-layer UV-cured acrylate coatings are common, with a soft primary layer for flexibility and a hard secondary layer for mechanical protection.

Applications

Plastic optical fibers are generally used for short-distance, low-speed applications, such as home networks, industrial networks, and automotive systems, due to their flexibility and ease of installation. High-performance perfluorinated polymer fibers are suitable for higher-speed applications like data centers and building LAN wiring. In summary, PMMA or perfluorinated polymers form the core, fluorinated polymers form the cladding, and acrylate coatings provide protection, making plastic optical fibers flexible, robust, and suitable for consumer and industrial applications.

The buffer or jacket on patch cords is often color-coded to indicate the type of fiber used. The strain relief boot that protects the fiber from bending at a connector is color-coded to indicate the type of connection. Connectors with a plastic shell (such as SC connectors) typically use a color-coded shell. Standard color codings for jackets (or buffers) and boots (or connector shells) are shown below: Remark: It is also possible that a small part of a connector is additionally color-coded, e.g., the lever o

Glass vs Plastic Optical Fiber – Differences & Uses

Plastic Optical Fiber (Polymer Optical Fiber or POF), is an optical fiber made of plastic. Typically consists of acrylic (PMMA) as the core (96% of the fiber cross-section, 1 mm diameter) to

What Are the Raw Materials of Fiber Optic Cables? Full Guide

A complete guide to the raw materials of fiber optic cables—optical fibers, PBT tubes, FRP rods, aramid yarn, steel armoring, HDPE/LSZH jackets, and more. Compare ADSS, OPGW,

A Guide to the Materials used in Fiber Optic Cable Manufacturing

© 2026 CJC FIBRE CONSULTANTS - All rights reserved

Alternatively, plastic fiber optic cables are made from materials such as acrylate and polyimide. These plastics have a higher index of refraction than glass, meaning they''re not suitable

Plastic Optical Fibers – polymer

Plastic optical fiber (POF), made from polymer, transmits light through its core, similar to glass optical fiber. POF typically has diameters between 0.25 mm and 1.5 mm and is often terminated with a

What Materials Are Fiber Optic Cables Made Of?

Fiber optic cables are made from a combination of high-purity glass or plastic, surrounded by cladding, coated with protective layers, and reinforced with strength members.

What Materials Are Fiber Optic Cables Made Of?

Optical fiber consists of flexible glass or plastic strands engineered to transmit light. Manufacturers produce these fibers through a strict three-step process: preform fabrication, drawing,

POF Basics: How It''s Made

In plastic fiber optics, materials such as polymethylmethacrylate (PMMA), polystyrene (PS), and polycarbonate (PC) are used. Each of these have their

Understanding the Differences Between Glass and Plastic Optical fibers

Plastic Fiber Optics (POF): Constructed from polymer materials like PMMA (Acrylic) or polycarbonate. Larger core diameter (0.25 to 3.0mm), simpler and more cost-effective manufacturing

Single Mode vs. Multimode Fiber Optic Cables

There are two main types of fiber optic cables: single mode and multimode. Although they can do the same job in some instances, the different

What is Duct Fiber Optic Cables, Application and

What is Duct Fiber Optic Cable? Duct fiber optic cable refers to a specific type of optical cable specifically designed for wiring through pre laid

Fiber Optic Cables Market Size, Share & Forecast to 2032

Optical Fiber Cable is a type of wire and cable used in telecommunications and data transmission. It is composed of a core of glass or plastic fibers surrounded by a

New Type Optical Cable Pulling Equipment Botswana

© 2026 CJC FIBRE CONSULTANTS - All rights reserved

Buy premium New Type Optical Cable Pulling Equipment Botswana in bulk from verified wholesale suppliers and manufacturers. Best prices, bulk discounts, trusted deals at go4WorldBusiness .

Fiber optic cable Market Size, Share & Trends, 2034

Based on cable type, the non-armored fiber optic cables segment dominated the market with 45.1% share in 2025, supported by their cost-effectiveness and wide usage in telecom

A Complete Guide to Fibre Optic Cables | RS

What is Optical Fibre? Fibre optic technology is an effective cabled-based communication system. It is reliable, versatile, and widely used in many applications and industries. This type of

Composite, optical fiber, power and signal tactical cable

A composite cable includes at least two optical fiber components and at least one additional component. An irradiated crosslinked jacket surrounds the optical fiber component and the

Fiber Optic Cable Types: Single-Mode, Multimode, and

A fiber optic cable (frequently shortened to “fiber cable”) is a specialized transmission medium crafted to carry data as light pulses through

Top Fiber Optic Cable Manufacturers in India 2026

Conclusion Fiber optic cables are essential for India''s broadband, telecom, FTTH, 5G, data center and enterprise connectivity growth. The right fiber optic cable
